

Dragon Medical One understands you—and your clinic.

Highly accurate, fully customisable medical speech recognition from Nuance.

Backed by Nuance's most robust speech recognition engine yet, Dragon Medical One is an intelligent, intuitive dictation tool for clinical professionals. It's designed to help you ease your paperwork burden and complete patient documentation up to three times faster using your voice.

Dragon Medical One transcribes with up to 99% accuracy from the first word you speak, and uses AI to learn more about your accent, speech patterns, and preferences over time, becoming more accurate by the minute.

Dragon Medical One is purpose-built for clinical use—and optimised for primary care

Using a combination of AI and machine learning trained on real Australian medical documentation, Dragon Medical One is built to cope with all the rigours of clinical work. So, from the very first time you use it, Dragon can recognise and transcribe even the most complex medical terminology, medication names, and common acronyms.

Build a workflow that suits you

No two doctors approach their workday the same way—and Dragon Medical One is designed for flexibility. Its dictionary is fully customisable, so you can add new terms and your preferred acronyms easily.

You can even launch entire workflows using a single phrase, and create personalised voice commands that insert blocks of text, such as best-practice clinical recommendations.

Designed for simplicity

We know GPs and nurses don't have the time to learn a complicated new tool—Dragon is intuitive and easy to pick up without hours of training.

And unlike other speech recognition tools, you don't have to train Dragon Medical One to recognise your voice. Dragon automatically builds a voice profile for you from the moment you start using it, so there's no time wasted with a complicated set up when you can be working on real documentation.

DRAGON MEDICAL ONE

- works at your pace, transcribing up to 160 words per minute
 - recognises hundreds of accents without extra training
 - learns dynamically as you dictate
 - includes customisable, shareable templates
-

99%

accuracy from the first word you speak

160

Transcribe up to 160 words per minute
